

FEATURE STORY

GROWING BEYOND THE TRADITIONAL COCONUT TRIANGLE

SUPPORTING FARMERS AND FUTURE RAW MATERIAL RESILIENCE IN THE EASTERN PROVINCE

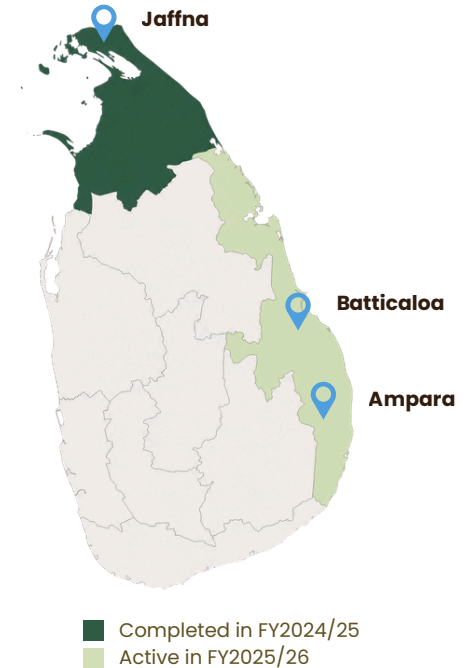

Haycarb's coconut cultivation support has expanded from the Northern Province to the Eastern Province, strengthening farmer livelihoods and the resilience of our coconut-based value chain.

In FY2024/25, Haycarb completed our commitment to provide 100,000 coconut trees in Jaffna. Building on this, a further 100,000-tree commitment was launched in the Eastern Province in FY2025/26.

Implemented with the Coconut Cultivation Board, the programme enabled free seedlings to be provided to farmers after Government subsidies. During the year, Haycarb supported 784 farmers across Ampara and Batticaloa, distributing 35,786 seedlings across approximately 558 acres of farmer-owned land.

Progress was affected by Cyclone Ditwah, but Haycarb remains committed to completing the Eastern Province 100,000-tree target in FY2026/27.

Why it matters

The programme supports farmer livelihoods by reducing the upfront cost of planting, while expanding coconut cultivation in emerging growing regions and strengthening the long-term resilience of Haycarb's raw material supply.
